

## CS202 – Data Structures

### LECTURE-10

# Balanced Binary Search Trees (AVLs)

Maintaining a balance

**Dr. Maryam Abdul Ghafoor**

**Assistant Professor**

**Department of Computer Science, SBASSE**

# Agenda

---

- Why Balance is important?
- Balanced Binary Search Trees

# Importance of Balance

- Highly inefficient for unbalanced tree

Perfectly Balanced BST

VS

Unbalanced BST

# How to Ensure Balance?

---

**Idea:** Rearrange tree to maintain balance

**Problem:** How do we rearrange tree while maintaining the BST property?

# How Can We Ensure Balance?

- Rearrange the tree while ensuring BST property
  - Using height of the nodes

- Height

If  $n$  is a leaf node

```
return 0 // n → height = 0
```

else

```
return 1 + max(height(n→right), height(n→left))
```

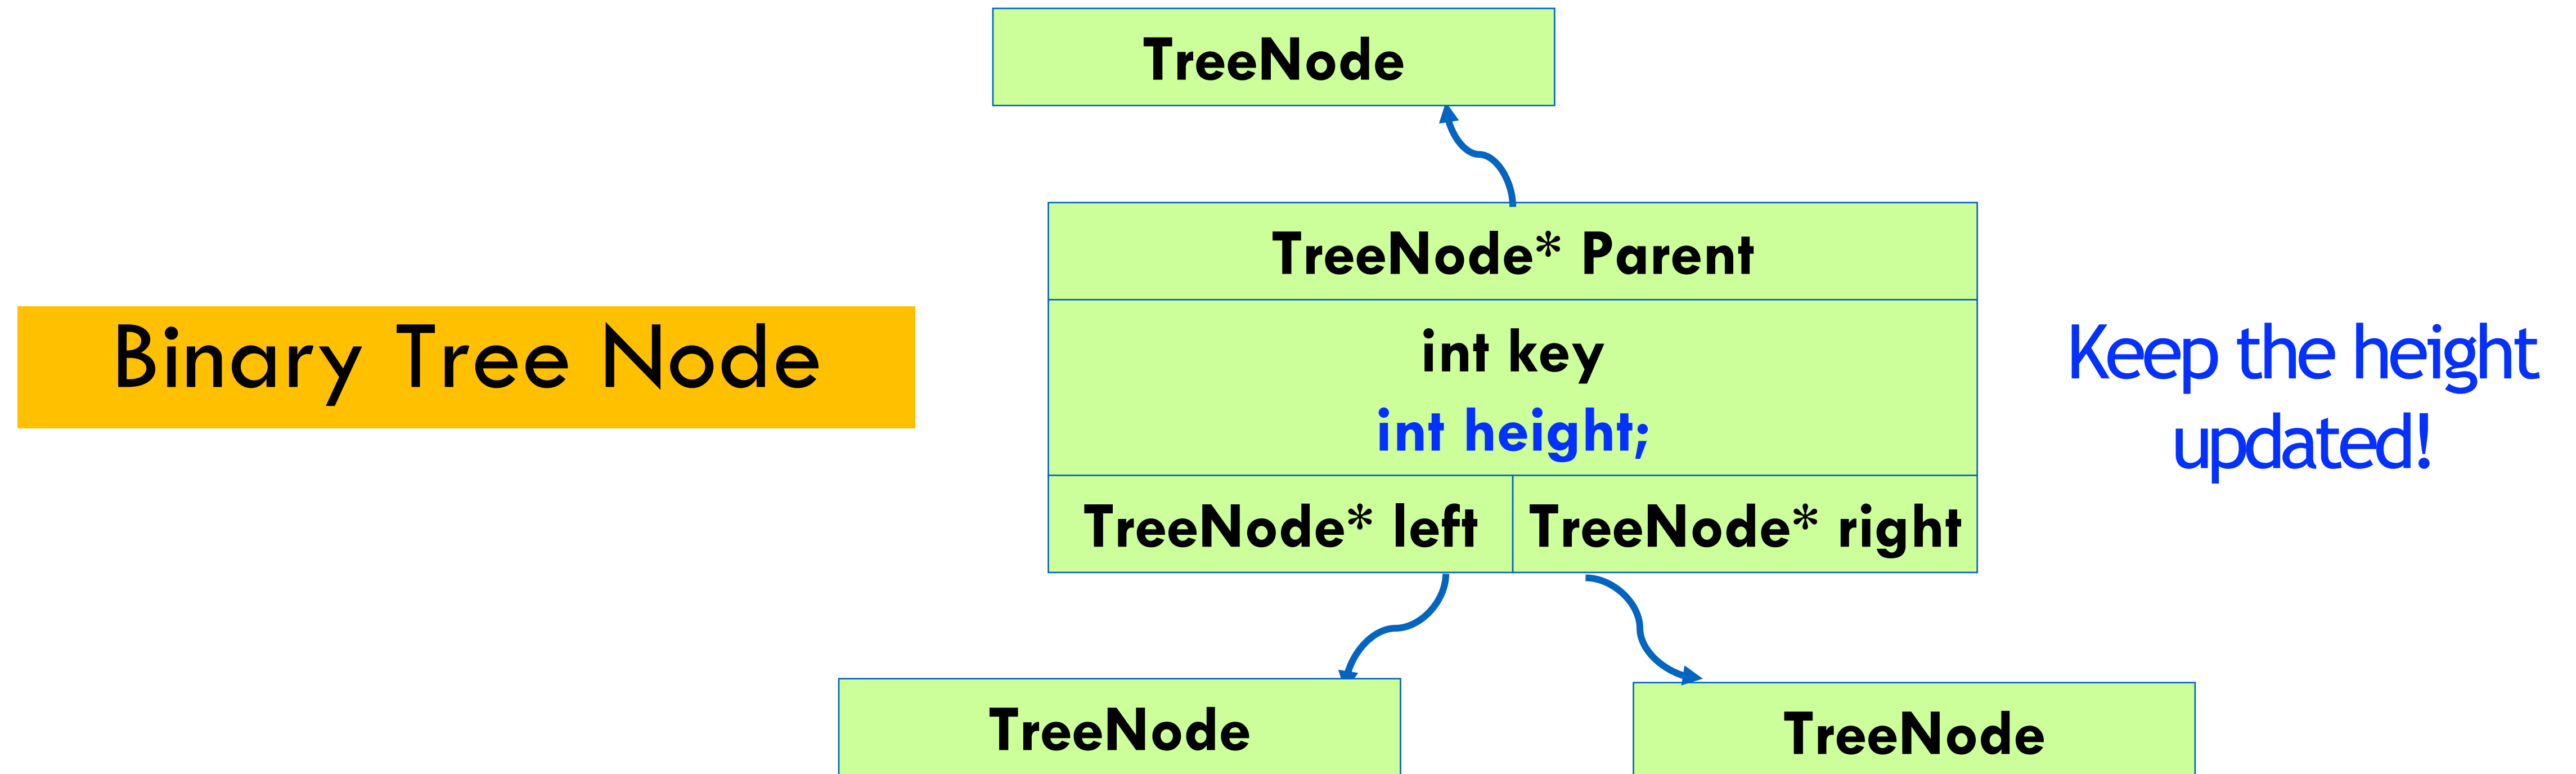

# Different Views for Maintaining Balance

---

- Height-view
  - Balance is maintained if the height is  $O(\log n)$
- Size-view
  - Balance can be maintained, if the size of left subtree and right subtree is similar

# Modified Binary Tree Structure

# AVL Property

---

- AVLS are
  - BSTs that maintain height-balance property
- Height Balance Property
  - For all nodes  $n$ ,

$$| n \rightarrow \text{left} \rightarrow \text{height} - n \rightarrow \text{right} \rightarrow \text{height} | \leq 1$$

# Which of the following are AVLs?

Poll

(A)

(B)

(C)

# Operations in AVLs

---

- Search
- Insertion
- Deletion

# Insertions in AVL

---

- Insert as in a simple BST
- Work your way up the tree, restoring AVL property
  - Suppose **x is the lowest node violating** the AVL property
    - Ask, “**Is x right heavy or left heavy?**” then ask, “**Is x’s child right heavy or left heavy?**”

# Insertions in Balanced BSTs (AVLs)

Insert 9

Balance Factor = 1

# Insertions in Balanced BSTs (AVLs)

Insert 9

Balance Factor = 2

Node **6** violates the **AVL property**.

What are some **possible options** for making this tree **balanced**?

# Insertions in Balanced BSTs (AVLs)

Insert 2

Balance Factor = 2

**Right- Right Case**

# Insertions in Balanced BSTs (AVLs)

Insert 5

Balance Factor = 1

# Generalizing

$$A < x < B < y < C$$

# Insertions in Balanced BSTs (AVLs)

---

Insert 2

# Insertions in Balanced BSTs (AVLs)

Insert 2

Balance Factor = 1

# Insertions in Balanced BSTs (AVLs)

Insert 2

Balance Factor = 2

Node **6** violates the **AVL** property.

What are some **possible options** for making this tree **balanced**?

# Insertions in Balanced BSTs (AVLs)

Insert 2

Balance Factor = 2

**Left-Left Case**

# Questions
